

Darrell Benbow Jr

Introduction:

To start I'd say I'm very proficient in Microsoft Office 365, my experience with the Microsoft Suite includes creating documents in word to share important information about a new product for my superiors to pass along to my colleagues. Also I've created spreadsheets in Microsoft Excel for recording and documenting my worked hours while as a mechanic for Kia Motors. I also have experience with outlook as it was necessary to create a Microsoft Azure account.

I have quite a few years of experience in leadership roles as I was a temporary on my platoon during drill while in the Army in addition I have also performed exceptionally well with real time updates to my team in a simulated environment. My management experience includes managing and overseeing operations for a well-known business that funds and operates various Automotive/retail locations across the nation.

Ultimately what I seek to gain from this program is to earn the knowledge and obtain the skills to be proficient in a IT/cybersecurity environment. So that I may be a valuable asset not only to my employer but to my future self.
